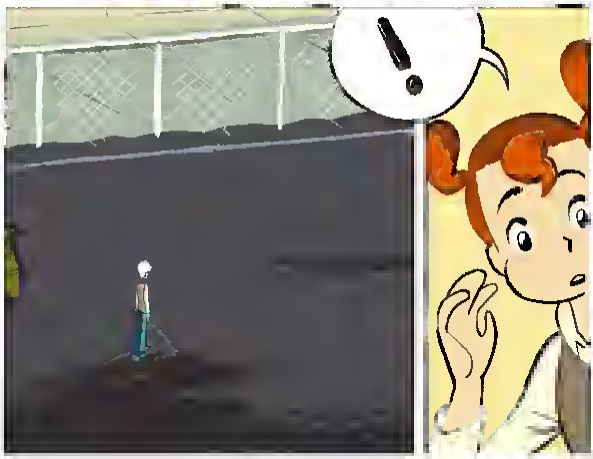
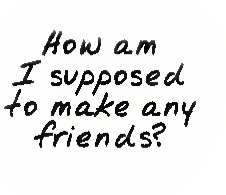
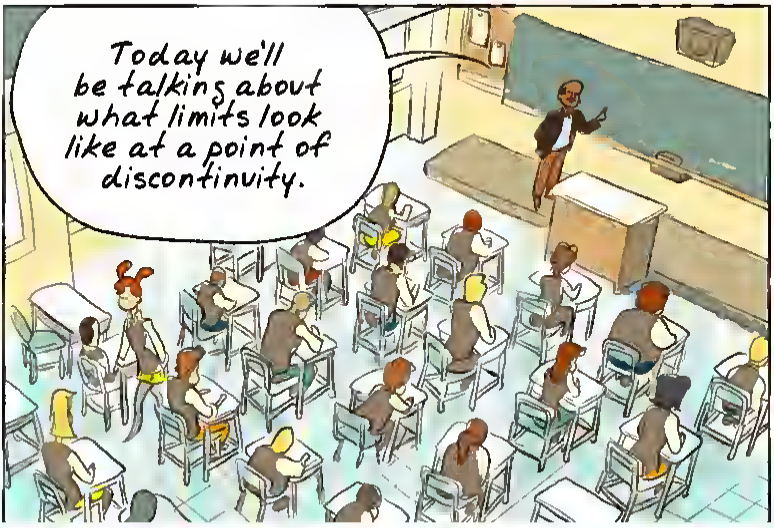
In the end, my team wins, but I'm pretty sure I had nothing to do with it.





How am
I supposed
to make any
friends?

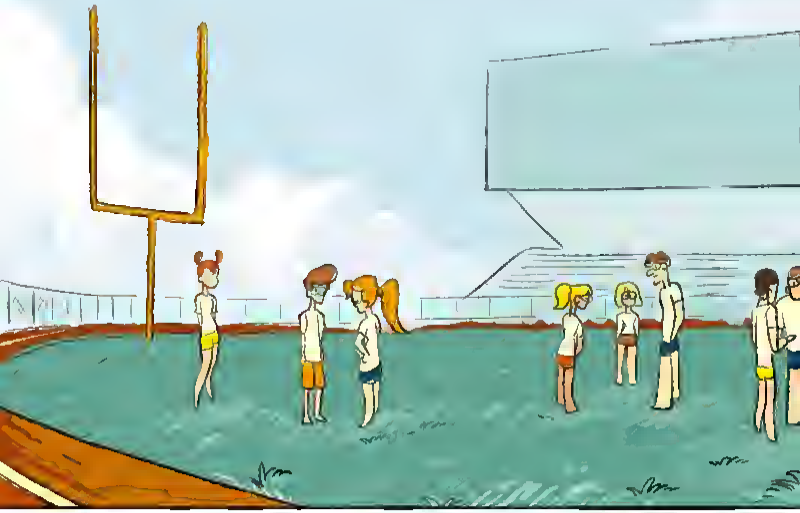
Amy, please have a seat.



Today we'll be talking about what limits look like at a point of discontinuity.

So let's just say that f(x) is equal to the absolute value of x minus 2 over

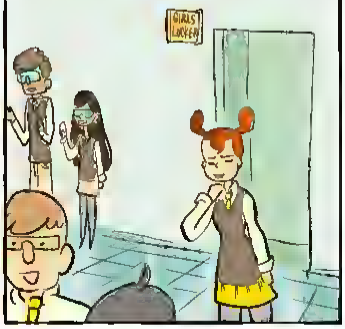
During the next period I have P.E.



I'm a bit nervous about the lingering weakness I feel from gravity fatigue, but I figure it's just a freshmen level class. It should be fine.

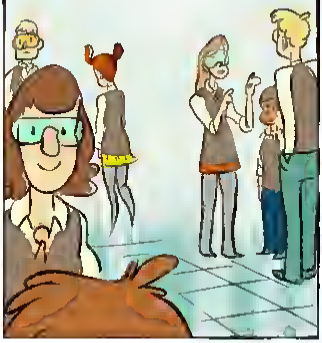
And then, we start running.

think I've ever sweated so much in my life.



The air's thicker here than it was on the station. More humid.

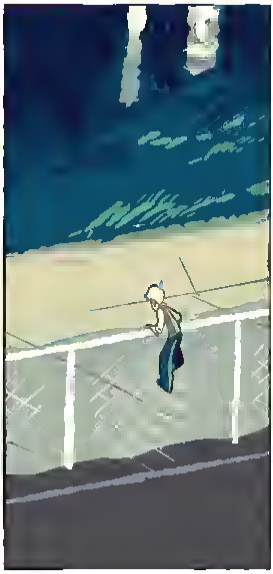
Hopefully no one notices how sweaty I am.



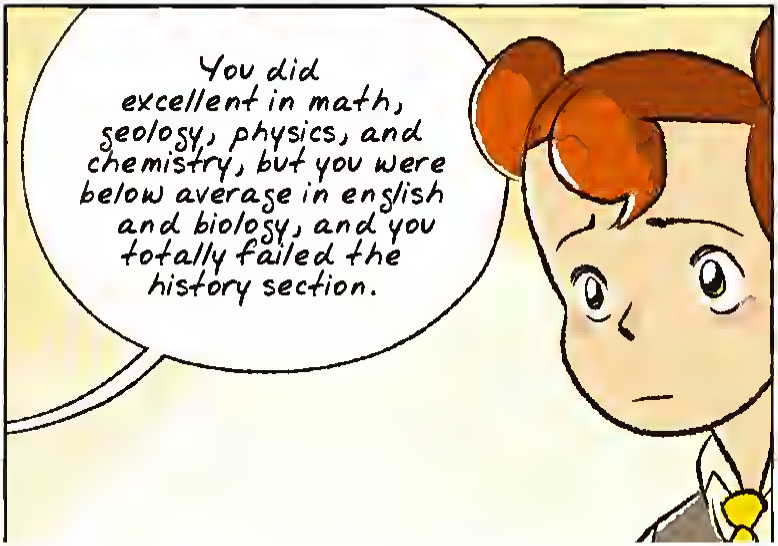
I hit the ball with the stick, and everyone shouts "RUN!" so I run.

But I go the wrong way and almost bump into another girl.

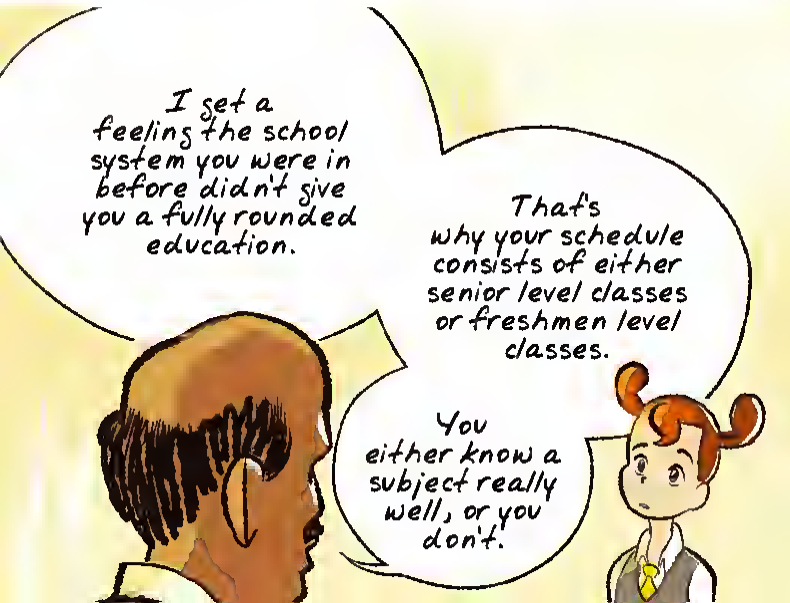
It's the boy from earlier!



...lopsided.

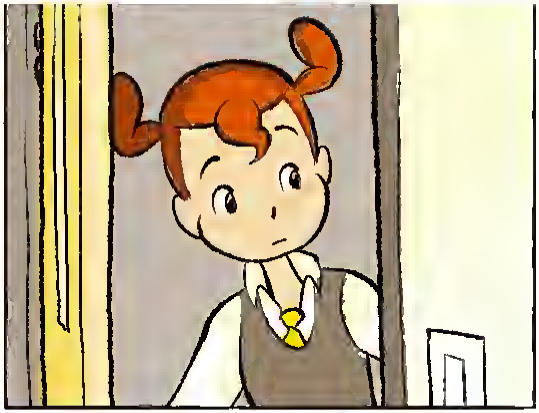


You did excellent in math, geology, physics, and chemistry, but you were below average in english and biology, and you totally failed the history section.

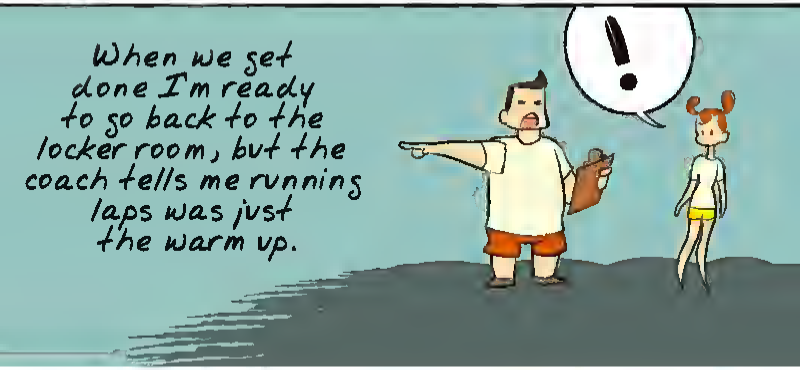


I get a feeling the school system you were in before didn't give you a fully rounded education.
That's why your schedule consists of either senior level classes or freshmen level classes.
You either know a subject really well, or you don't.

They laugh about things I can't see.
They talk to people who aren't there.
I feel locked out. Separate.

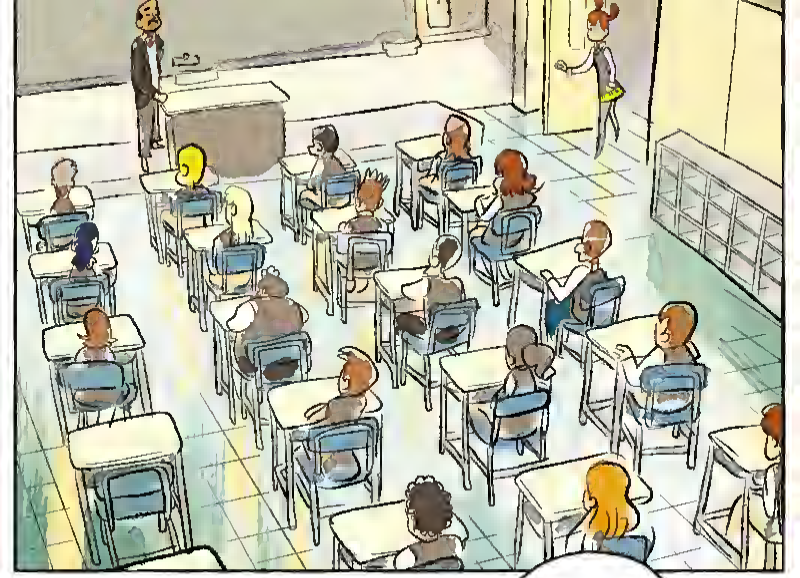


Where is he going? Doesn't he have class?

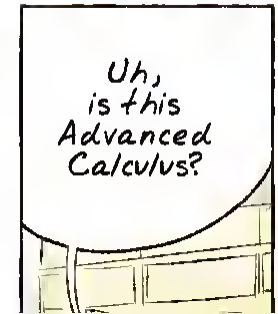


When we get done I'm ready to go back to the locker room, but the coach tells me running laps was just the warm up.
!

We then play a confusing game where they throw a ball at you and you have to avoid getting hit with only a stick to defend yourself.



Can I help you?



Uh, is this Advanced Calculus?

Behind the school stands a forest burning with color-- joyful hues sing out in the branches of the trees.

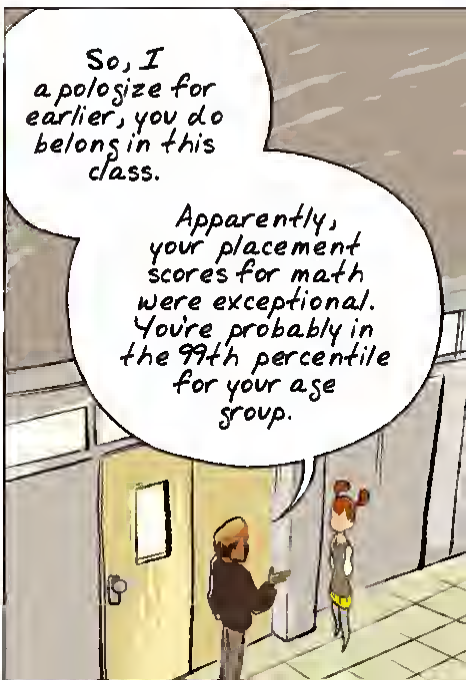
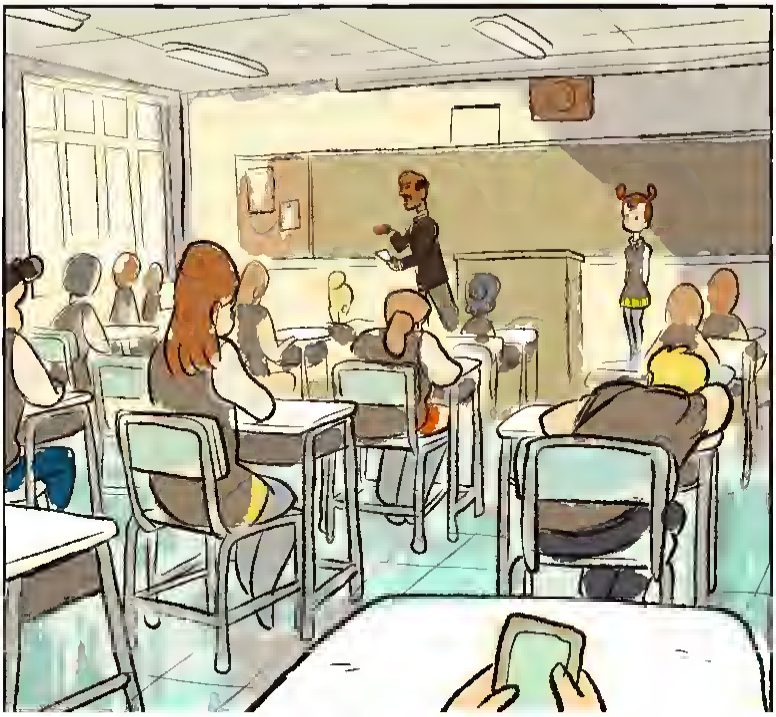
Alright Amy, I figured out what's going on. Why don't you step out in the hall with me.
Okay...



So, I apologize for earlier, you do belong in this class.
Apparently, your placement scores for math were exceptional. You're probably in the 99th percentile for your age group.

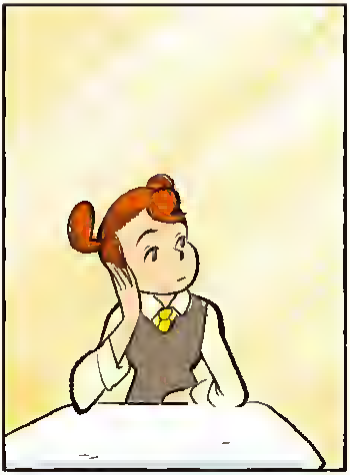
Maybe I should transfer down to a lower math class. I'd be bored out of my mind, but at least I'd be with kids my own age.

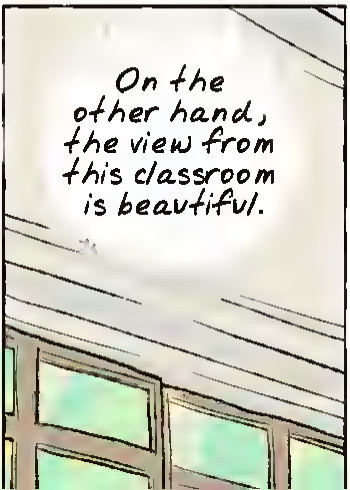
x minus 2.
Now, what I'm curious about is the limit of f(x) as x approaches 2.
You can see that the function is not defined when x is 2.
You



The class is silent.
I can't tell if people are looking at me or looking at something

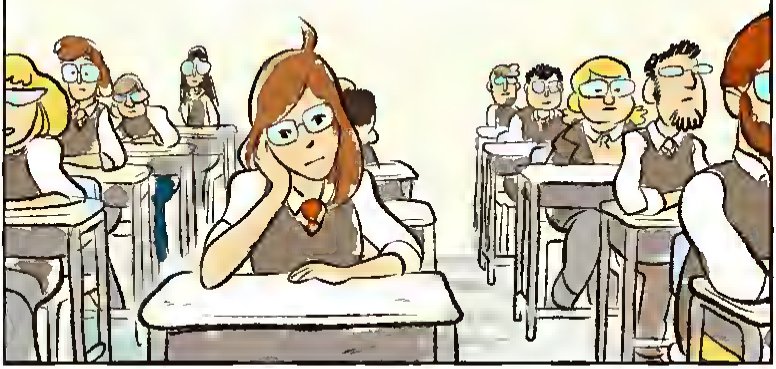
Here we so.

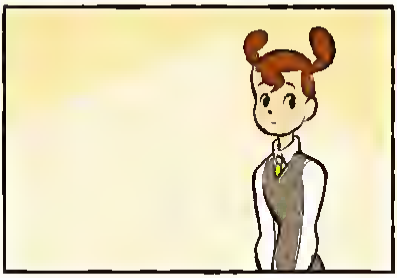


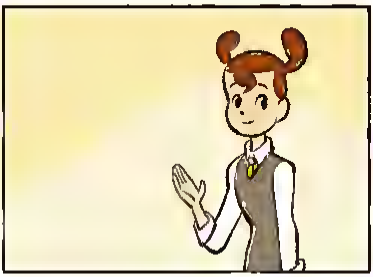


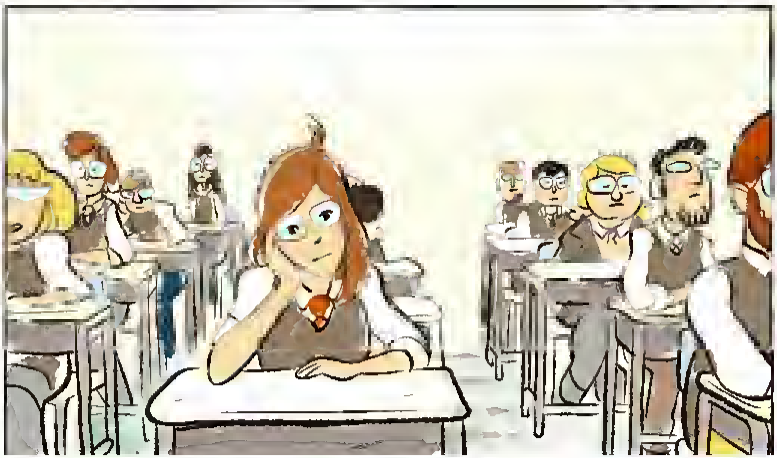
On the other hand, the view from this classroom is beautiful.

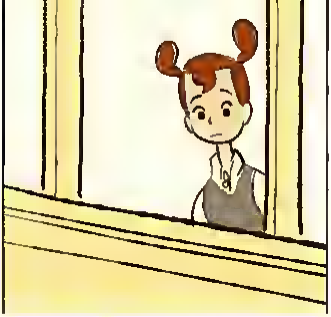
displayed on their net gear glasses.



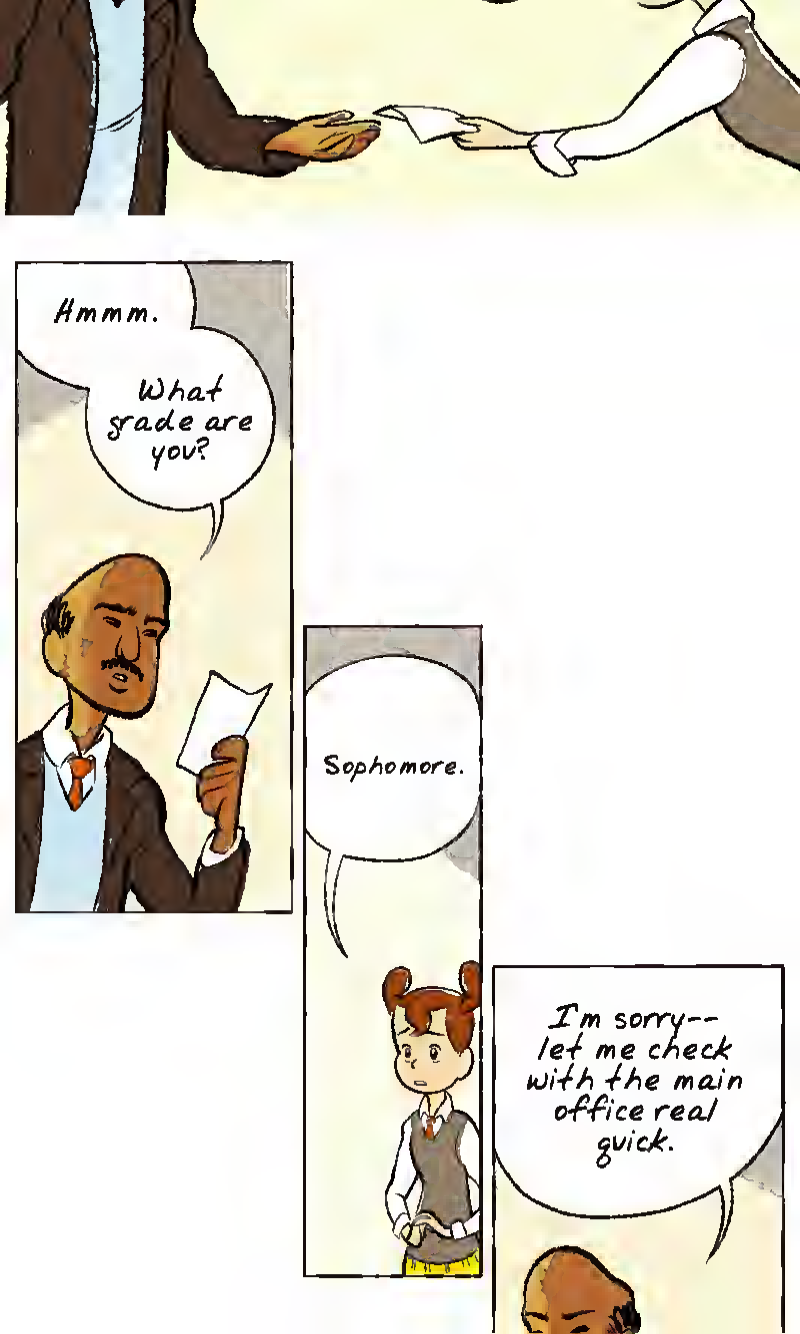








Wow!
I guess that makes sense...
On the colony they really emphasized math--science too, because we were all expected to get jobs in the mine after graduating. I was planning on going into geotechnical engineering.
I see.
Well, that explains some things.
What do you mean?
Your placement scores were a bit...



Hmmm.
What grade are you?
Sophomore.
I'm sorry-- let me check with the main office real quick.

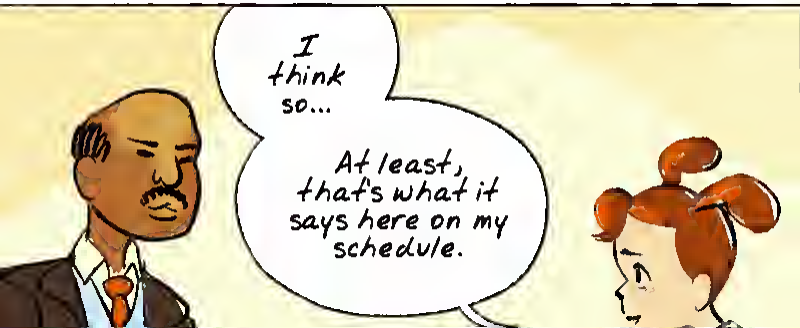
Don't be nervous. You're a good student.
I'm sure you'll catch up in no time.

Alright, everybody. Let's get started!

Yes.

I'm Amy. I just transferred here.

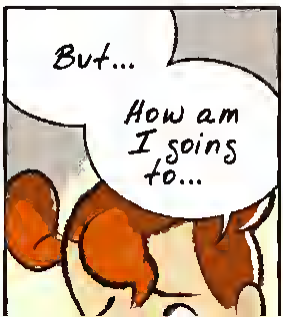
Are you sure you have the right classroom? This is a senior level class.



I think so...
At least, that's what it says here on my schedule.

Wait, I don't have any classes with people my age?

I'm afraid not.



But...
How am I going to...

Who am I kidding?
The kids here can't even see me.

Everyone is plugged into their own world through net gear.
